# PULSE SERIES

**PULSE MINI | PULSE | PULSAR**  
Network Music Players

After the tremendous success of our ZEN Music Server series we have announced the new PULSE Network Music Player series to bring the Innuos experience to music lovers who mostly want to play music from streaming services, or who just want another zone in their home connected to their main music server.

**Your go-to players for digital music.**

## **PULSEmini** Network Music Player

PULSEmini has the power and reliability to run innuOS Operating System specifically configured for optimal music playback: Custom-designed motherboard with an Intel quad-core processor, Industrial-Grade SSD module specifically for the Operating System and 4GB of highly reliable Industrial-Grade RAM.

PULSEmini outputs PCM up to 32bit/768kHz as well as up to DSD512 via USB to compatible DACs. It further complements its digital outputs with analog RCA, coaxial and optical SPDIF outputs capable of up to 24bit/192kHz.

**PULSEmini may be our entry level network music player but its sound is anything but.**

## **PULSE** Network Music Player

The PULSE steps up by integrating our new custom RECAP2 LPSU power supply, designed in collaboration with Dr. Sean Jacobs, which includes high-grade components such as Medical-grade filtered IEC, Audio-Grade toroidal transformer and Mundorf Capacitors. Additionally, it has 8GB RAM for handling even larger music library databases and has an AES/EBU output instead of RCA for further connectivity with audio systems.

**PULSE raises the bar delivering a smoother and more organic sound that you can enjoy for hours without fatigue.**

## **PULSAR** Network Music Player + USB Reclocker

PULSAR is the star of our PULSE Series. Wrapped in a premium aluminium chassis, the PULSAR packs a custom ARC6 module with Active Rectification, over 130000µF of Mundorf Capacitors and a Single-Level Cell (SLC) SSD for Operating System.

Instead of SPDIF and AES/EBU outputs, the PULSAR offers an optimised USB output to take sound quality to a whole new level by incorporating a PhoenixUSB Lite Reclocker powered by a custom DC4 CX Regulator Module with Audionote KAISEI capacitors for a smooth yet fast and detailed sound.

**PULSAR offers you a large, deep soundstage with incredible instrument separation and true-to-lifefound textures that brings true musical emotion to your home. Listen to what you have been missing!**
